Jupiter Mines Limited

ENCOURAGING INTERSECTIONS OF IRON ORE FROM BROCKMAN IRON PROJECT

KEY POINTS

- **Encouraging initial results from RC drilling at Brockman Project including:**
  - **7m @ 59.4% Fe (62.9% CaFe) from surface**
  - **7m @ 56.5% Fe (62.8% CaFe) from surface**
  - **5m @ 55.7% Fe (60.7% CaFe) from surface**
  - **7m @ 56.9% Fe (60.2% CaFe) from surface**
  - **9m @ 56.3% Fe (59.0% CaFe) from surface**
- **Brockman Project strategically located near Rio Tinto's Brockman 3 Iron Ore Operations and FMG's field camp.**
- **Application lodged for new tenement abutting the Brockman tenements.**
- **Exploration program to be developed for expanded tenement holding.**

Jupiter Mines Limited (ASX: **JMS** – "Jupiter") is pleased to announce that it has received encouraging assay results from the initial drilling program completed at its 100%-owned **Brockman Iron Project**, located 60km west of Tom Price in the Pilbara region of Western Australia.

The Brockman Iron Project is well located with respect to regional mining infrastructure, with the western boundary of the Brockman tenements adjoining Rio Tinto's Brockman 3 Iron Ore Operations and located near Fortescue Metal Group's Pilbara field camp.

Jupiter completed a preliminary 2-week drilling program in November 2007, which was designed to test iron mineralisation detected from previous surface rock chip sampling. The program comprised 33 RC vertical holes totalling 990 metres, which were drilled in a series of seven traverses approximately 200 metres apart, orientated along the dip of the local geology (see Attachment 1).

The best intersection was in hole BRC005, which returned **7 metres @ 59.4% Fe (62.9% calcined Fe or CaFe).** Jupiter is encouraged with this first pass program with the better intersections summarized below:

Hole No.	From (m)	Width (m)	Fe (%)	LOI (%)	Al_2O_3 (%)	P (%)	S (%)	SiO_2 (%)	CaFe (%)

BRC033	2	3	**52.6**	9.32	7.2	0.028	0.020	6.93	**56.8**

Notes:
1) *Analyses conducted by ALS Chemex using Fusion/XRF analysis with Loss on Ignition (LOI) determined using OA-Grad5t Multi-temperature analyses*
2) *Calcined Fe (CaFe) calculated by using the formula CaFe% = ((Fe%) / (100 – LOI 1,000)) * 100*

A full table of sample results from the program is provided in Attachment 3 to this announcement, while drill hole locations are shown in Attachments 1 and 2.

In light of the encouraging results from this preliminary program, Jupiter has lodged an application for Prospecting Licence PLA47/1314, which abuts the Brockman Iron Project tenement. Areas have been identified on this tenement that warrant follow-up exploration through field-based activities including mapping and rock chip sampling.

The Company's broader exploration strategy at the Brockman Iron Project will be reviewed once an initial program of field activities has been completed on the new Prospecting Licence, and in conjunction with its other exploration priorities at its Central Yilgarn Iron Ore Project.

The Brockman Iron Project represents a strategic exploration opportunity for Jupiter within a world-class iron ore mining region.

Greg Durack
Chief Executive Officer

Competent Person

The information in this announcement that relates to Exploration Results is based on information compiled by Mr Charles William Guy who is a Member of the Australian Institute of Geoscientists and a full-time employee of Jupiter Mines Limited. Charles William Guy has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity that he is undertaking to qualify as a Competent Person as defined in the 2004 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Charles William Guy consents to the inclusion in the announcement of the matters based on his information in the form and context in which it appears
